# **Mobile Connected App 2.0 – MINI UI for 07/20 & Way Forward**

# Background

- **MINI specific UI Design** has been approved by ED and ED-M
- According to Architecture Circle alignment, **proposed Design not feasible**  
→ CTW MINI Team **in-between** the **two directions**
- Agreement with DE-8 on 05/02/20 to go with an **iterative approach**:
  - **07/20**: Basic Theming/Skinning (+ MINI Upper Vehicle Tab)
  - **Next**: Working on Extended Theming
  - **Prerequisite**: Agreement between all stakeholders (BMW + MINI) for this approach and working model to move forward

# Goal for Today

- Reach common understanding on **Implications & Limits** of (Slides 4-5):
  - Basic Theming/Skinning
  - Extended Theming
  - Separate Widgets
- Reach agreement on **Scope for 07/20** (Slides 6-8)
- Align on prerequisites for **Extended Theming** (Slide 9)

# Clarification of Terms

- **Basic Theming (“Skinning”)** = allows to apply different Colours, Fonts/Text Styles & Icons to widgets of the entire app via **global configuration** (“theme state class”), while the style of the widgets remains unchanged

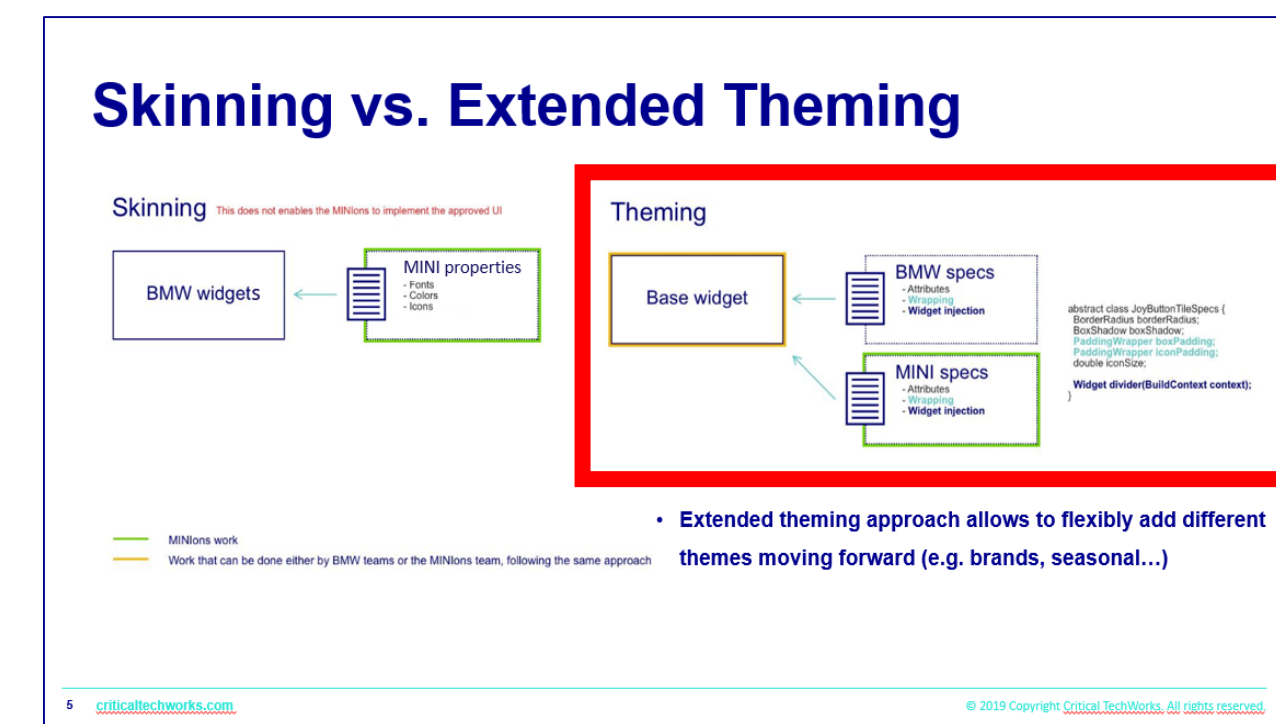

→ Doesn't allow to implement MINI UI Design

## In Progress

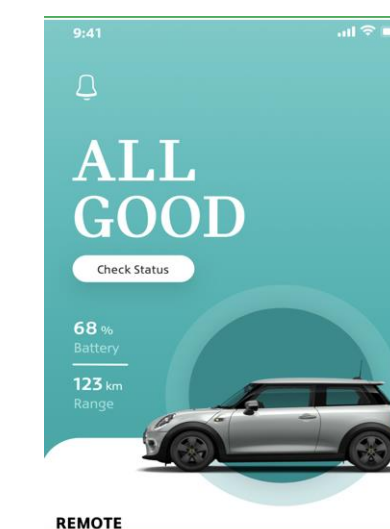

- **Extended Theming** = additionally allows for different Borders, Shadows, Padding etc. of widgets, using a “**base widget**” with all behaviors for different widget styles as well as specs files for the specific styles (“specs classes”)
- **Separate Widgets** = needed to further differentiate Design, (→ MINI Upper Vehicle Tab, Tab Bar)

Skinning

Separate Widget

# Scope 07/20 - Summary

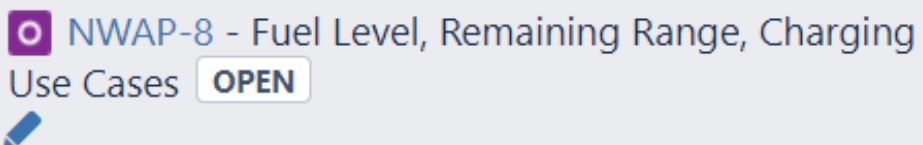

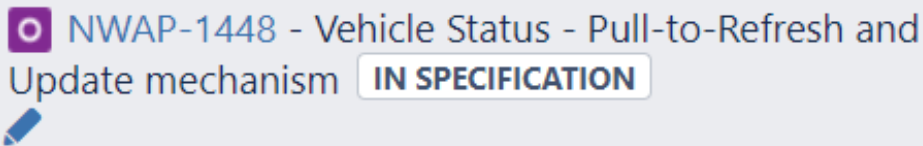

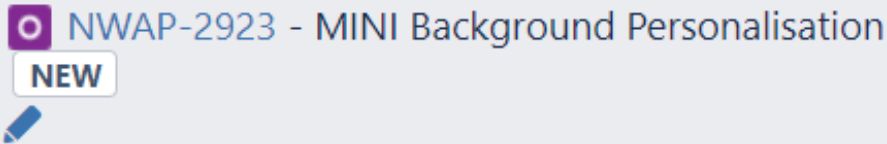

WHAT	DESCRIPTION	HOW	AGREEMENT 05/02 & Planned
Colors (Light Mode), Icons, Fonts/Text Styles	Match MINI Colors, Icons and Fonts/Text Styles to exact same ones defined for BMW	Theme State Class (Basic Theming/Skinning)	YES
Asset Exceptions (Logo, Splash Screen, Images etc.)	Match MINI Logo, Splash Screen, Images etc. to BMW ones	Different Images	YES
Color Manipulation for Widgets, Text, Icons	Apply a different Color than the BMW one to <b>defined</b> MINI Widgets, Text, Icons	Exception inside Widget (Workaround) <i>or</i> Widget Specs Classes ("Extended Theming")	NO
Upper/Lower Case Text Manipulation	Adapt BMW Upper Case to Lower Case for MINI Widgets	Different approaches	NO
Border Radius, Box Shadows, Paddings etc.	Add/Adapt/Remove Border Radius, Box Shadows, Paddings of Widgets for MINI	Widget Specs Classes ("Extended Theming")	NO
MINI Tab Bar	MINI specific Widget	Separate Widget	YES
MINI Upper Vehicle Tab	MINI specific Widgets	Separate Widgets	YES
<del>MINI Garage</del>	<del>MINI specific Widget</del>	<del>Separate Widgets</del>	?
MINI Background Chooser	MINI specific Feature	New Feature Module	Stretch Target

# 07/20 Planning: Feature complete in 05/20

# Preparation Extended Theming

- **Agreement** by all stakeholders to move forward with evaluating **Extended Theming**, once Basic Theming/Skinning (+ MINI Vehicle Tab) is ensured for 07/20 (including priority for maintenance, if required)
- **Working + Architectural Agreement** (via Architecture Circle) needed how to work on Extended Theming in parallel to Basic Theming/Skinning (e.g. Joy UI)
  - MINlons to come up with a proposal
    - Work jointly on Joy UI Library and built components in a way that they are compatible for BMW and MINI
    - *OR*: Provide final components for BMW and allow refactoring by MINlons

# Skinning vs. Extended Theming

## Skinning

This does not enable the MINlons to implement the approved UI

## Theming

- MINlons work
- Work that can be done either by BMW teams or the MINlons team, following the same approach

- Extended theming approach allows to flexibly add different themes moving forward (e.g. brands, seasonal...)

# Suggestion

- **Iterative approach:**

- Priority: Skinning to be ready for 07/20 (basically already there)
- Next: Working on Theming approach
- Common agreement on this approach and working model to be achieved before (incl. MINI)

# Joy in Motion
